

## Group P11 – site guide

There is a navigation bar in the header of each page. Hovering over one of the links will change its colour to show you what you are about to click. Clicking on the page you want to see and it will load that page.

In the footer, we have added text to show our team name and a copyright symbol to show that the website belongs to us. There is also a link that will open up the users email and inputs our information for easy contact.

The home page includes an overview of the UN goals we have chosen and a slideshow of images. We added the slideshow to improve the look of the site and it allows several images to be shown in the same space. It works by having all the images put in the same element and just hiding the ones we do not want to show, we programmed it to change image every 5 seconds, more images can be added easily.

The meet the team page includes information about each team member and a little about what they contributed to the development of the website, we have added an image icon to show where we would put the image of ourselves.

The goals page follows the same layout of the team page, it includes images of each goal and a description of each goal under its image. The descriptions contain a numbered list, to create this list we used javascript, a list element is created and for every new line a number is incremented and shown in the list.

Our sign-up page includes a form to sign up to the newsletter, when the required information is inputted and the submit button pressed, the user will get a confirmation message.
